

AidMac

AIDMAC MACHINERY & CONSULTANCY LTD.

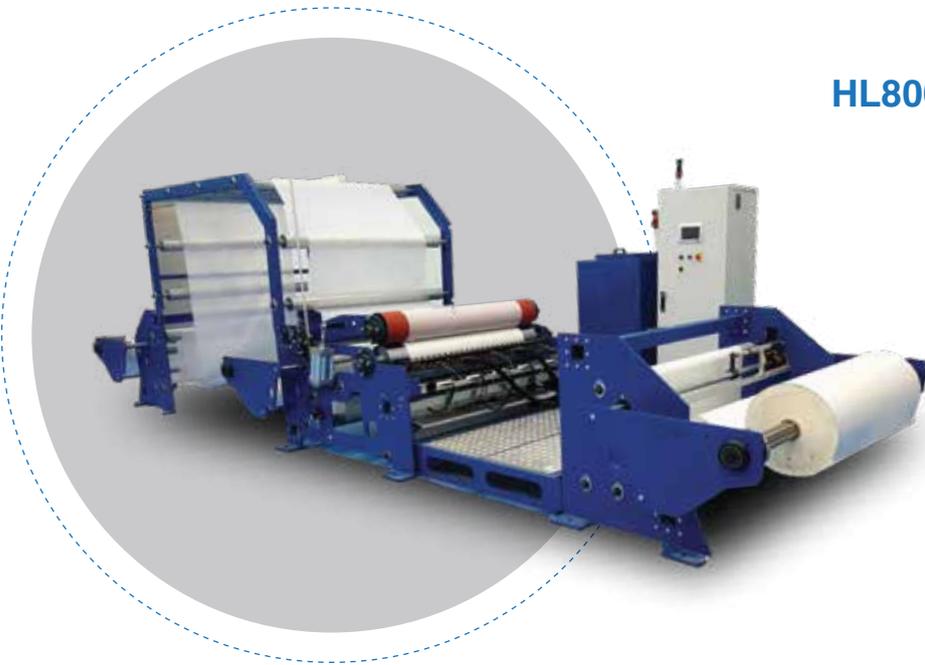

Medical Plaster Machines Production & Consultancy

www.aidmac.com

HL8000 Hotmelt Adhesive Coating & Laminating Machine

Hotmelt Adhesive laminated on
Fabric, Pe, Pvc, Nw, Paper.

Coating & Lamination Solutions

SF8000 Solvent Based Glue Coating & Laminating Machine

Adhesive is directly coated on
Fabric, Pe, Pvc, Paper and
lamination is used for NW.

CM6000 Surgical Tape Slicing Machine

Adhesive coated bobin is cut both horizontally and vertically and rewinded on 3" core.

Cutting Solutions

AD6000 Surgical Tape Cutting Machine

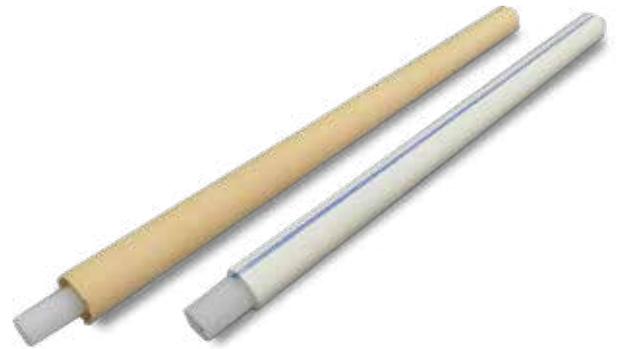

1" rewinded adhesive material is cut in different widths

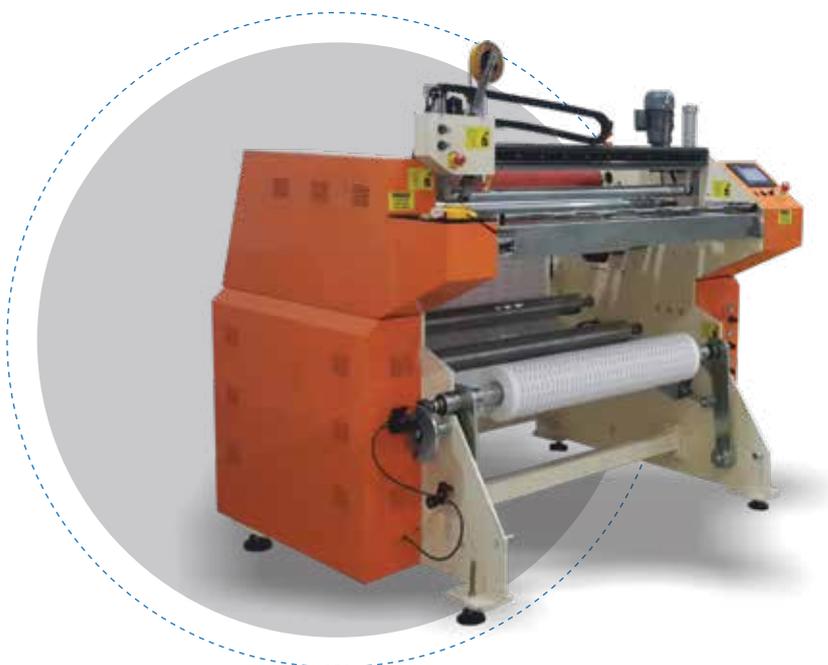

SM7000 Surgical Tape Rewinding Machine

Adhesive coated bobin is rewinded
on 1" core in different lengths

Rewinding Solutions

RW7000 NW Tape Rewinding Machine

Adhesive coated NW bobin is rewinded on
1" core in different lengths

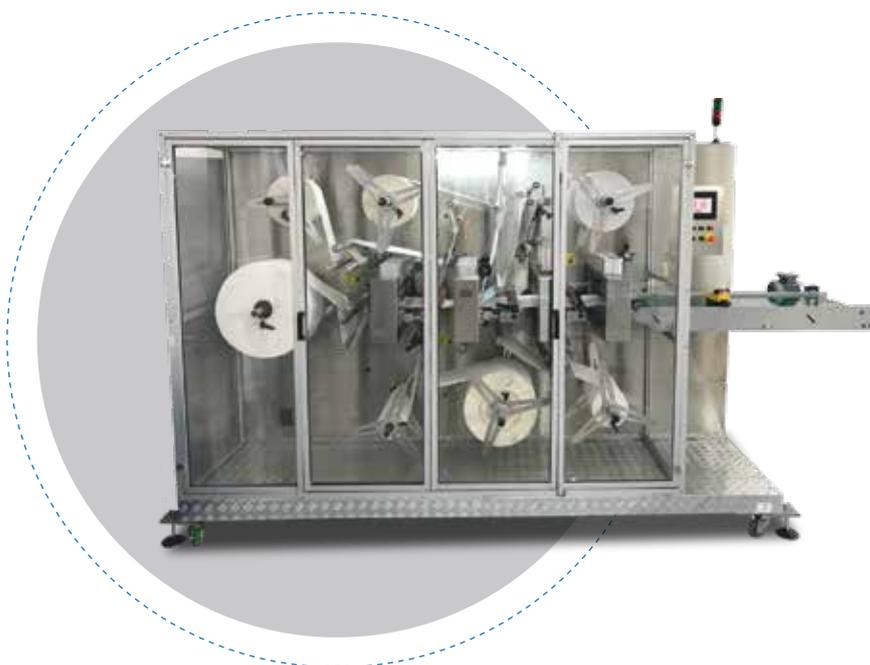

FP5000 First Aid Plaster Machine

First aid plaster making machine with continuous or photocell cutting

Packaging Solutions

WD5000 Wound Dressing Machine

(NW or PU) Wound dressing / pad making machine with continuous or photocell cutting.

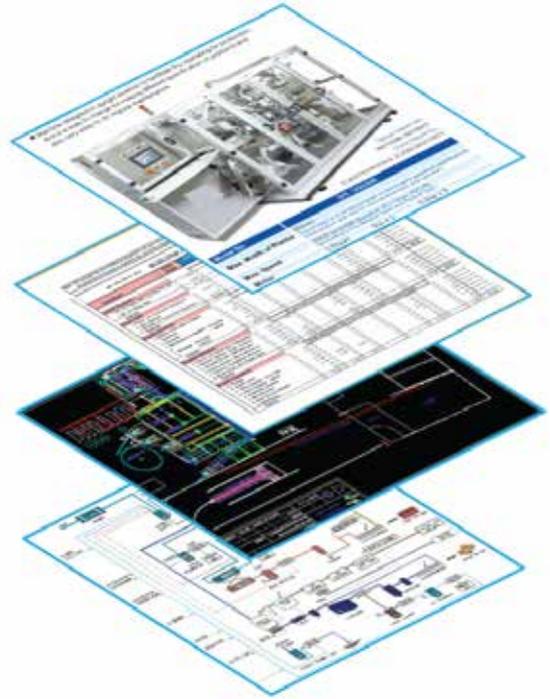

TURNKEY CONSULTANCY SERVICES

AidMac offers a wide range of consulting services from the establishment of a manufacturing plant for medical plaster production, to the management and production processes.

- Investment and Feasibility Studies
- Creating manufacturing process workflows and machine layout
- Establishing a quality management system
- Machine technical service and spare parts supply
- Raw material selection and provision
- Know-How & Technology transfer
- Long term operation and production support

With more than 10 years of industry experience, Aid Mac can support you in each step of your investment with a team of engineers, technicians, financial experts and industry veterans.

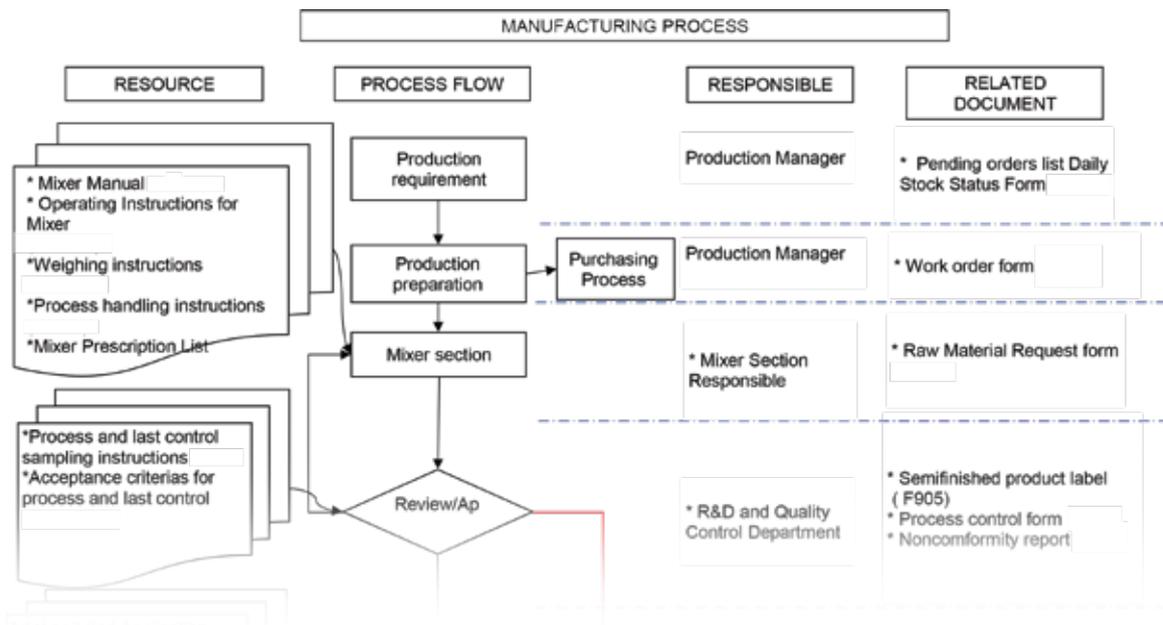

1. A Complete Analysis of Your Market

In order to establish the right investment decisions, a complete analysis of your target markets is important. Evaluation of consumer demographics, potential buyers and local healthcare system are prerequisites of a successful analysis. With the access to global healthcare market data AidMac provides important insights for your feasibility studies.

2. Creating the Production Line

Design of the production line plays a big role on your effectiveness. Architectural constraints, budget and demands must be taken into consideration. Aid Mac creates workflow studies and simulations to make sure you are getting the best results for your investment.

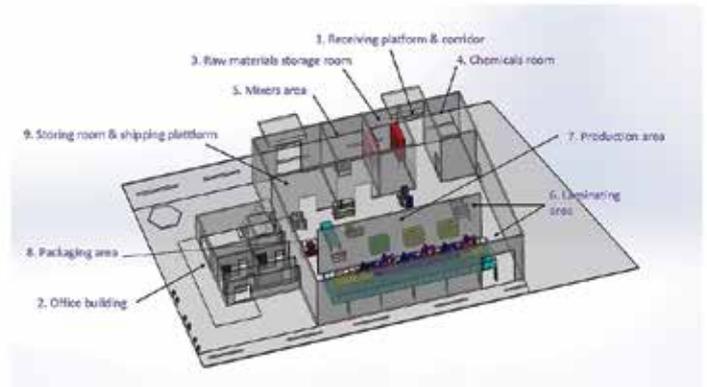

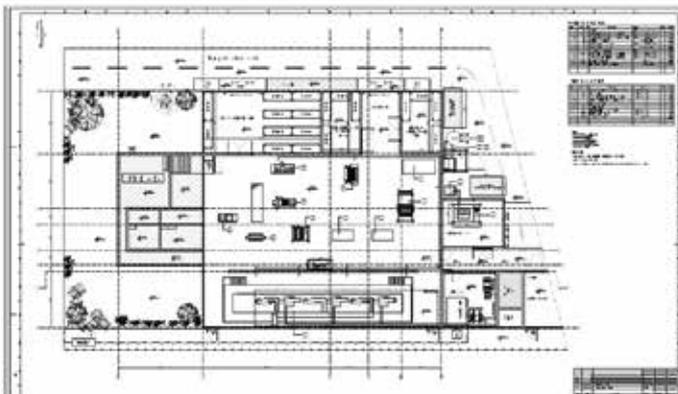

3. The Secret Formula

Compounding the pressure-sensitive adhesive is considered a "trade secret" and manufacturers select methods experimentally designed for the particular adhesive used. Selection of a particular formulation depends on properties desired in the adhesive, experience of the producer and availability of raw materials. The adhesive should be non-irritating to the skin and should possess good aging qualities in storage and in service. It should exhibit minimum "creep" in use, be easily applied to the tape, should not transfer to the back of the tape (offset) when rolled up, and should be stable under a wide range of climatic conditions. AidMac helps you create your own secret formula and ensure to and give you a head start in competition!

4. Designing the Factory Layout

As with most manufacturing plants there is no example of a typical adhesive tape plant. Recommended area allocations and plant layouts are extremely variable, and depend a great deal upon the specific adhesive used and its technology. Before starting construction, entire factory layout is studied and discussed.
